

Stefan Dili

SENIOR FULL STACK ENGINEER · TYPESCRIPT · NODE · .NET

Novi Sad, Serbia (CET) · Open to remote, EU / US hours
stefan.dili.021@gmail.com · linkedin.com/in/stefan-dili · github.com/dili021

SUMMARY

Senior engineer with 6+ years building production web systems. Strongest in TypeScript and frontend architecture across Angular, React and Vue, with backend delivery in .NET, Node.js and Ruby on Rails. Most recently sole developer on two greenfield platforms in regulated industries, healthcare administration and mortgage lending, each owned end to end from an empty repository to a running system. Builds with LLM agents as part of the delivery process: cut agent error rates by roughly 40% and raised delivery velocity about 2.5× by redesigning agent rules and workflows on a production team.

CORE SKILLS

Languages & frontend TypeScript, JavaScript, C#, Angular, React, Next.js, Vue 2/3, Blazor, TanStack Query, Redux

Backend Node.js, .NET, Ruby on Rails, PostgreSQL, SQL, REST, GraphQL, WebSockets

AI-assisted delivery Claude, LLM integration, agent workflow design, document-analysis pipelines

Platform & ops Azure DevOps, Jenkins, canary releases, Docker, Git, Linux, New Relic, PostHog

Auth & security OAuth 2.0, PKCE, OIDC, Okta

Testing Cypress, Jest, RSpec

EXPERIENCE

NextBridgeIT Senior Software Engineer

June 2026 – Present · Remote · *Client names withheld under NDA; systems described below.*

- Sole developer on a **healthcare administration platform**, built from an empty repository: .NET API and Angular administrative dashboard. Owned the data model, API design, authentication and delivery.
- Built a **mortgage application platform** end to end, frontend and backend, in which submitted borrower documentation is analysed by an LLM service. Owned the API, the document intake and processing flow, and the user-facing application.
- Joined a four-person team on a separate healthcare system, taking ownership of one module across frontend and backend.
- Stack: .NET, C#, Angular, Blazor, Azure DevOps. Claude used as a standard part of the

development workflow.

Grid Dynamics Software Engineer

June 2024 – February 2026

- **Redesigned internal LLM agent rules and workflows, cutting error rates by roughly 40% and increasing delivery velocity about 2.5×** across the team.
- Led development of a scheduling and geolocation module for a national US apparel retailer, running in production across their store network.
- Shipped through a canary release pipeline (Jenkins): validated each rollout against New Relic telemetry before promoting to production.
- Implemented secure OAuth authentication using PKCE.
- Worked across Ember.js and Vue codebases, using New Relic to diagnose and monitor production behaviour.

Cramick-IT Frontend Developer, then Frontend Developer / Product Manager

December 2020 – September 2021 · March 2023 – June 2024

- Built the frontend of a user-facing product from an empty repository through pre-release.
- Led the Vue 2 to Vue 3 migration across two codebases, the larger spanning roughly ten modules, and introduced TypeScript to both.
- Built reusable Vue and Quasar component libraries used across teams.
- Implemented real-time features over WebSockets.
- Took product ownership beyond implementation: shaped how features behaved, and replaced standing meetings with async workflows and clearer ownership.

Symphony Software Engineer

March 2022 – March 2023

- Contributed to frontend architecture for a React/Next.js application.
- Implemented microfrontends with Webpack Module Federation.
- Designed a hybrid HTTP and WebSocket communication model.
- Implemented authentication with Okta and OIDC.
- Contributed to Node.js services in a microservices environment.

EDUCATION

Microverse Full-Stack Web Development

2020

1,500+ hours of structured remote development in distributed teams: pair programming, code review, daily standups. JavaScript, React, Ruby on Rails, SQL.
